ARYAN SAHU

CUSTOMER ENGINEERING INTERN | API INTEGRATIONS | E-COMMERCE & PAYMENTS

+91 8283965060 • aryancoder999@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on project experience building REST APIs, integrating checkout and payment workflows, validating HTTP/JSON requests, and testing application failure paths. Uses Node.js, Express.js, MongoDB, Postman, k6, and automated tests to investigate API behavior, validate fixes, and document technical workflows. Interested in e-commerce integrations, merchant onboarding, checkout reliability, and customer-facing technical problem-solving.

TECHNICAL SKILLS

Languages	JavaScript, Java, Python, SQL, HTML/CSS
APIs & Backend	Node.js, Express.js, Flask, REST APIs, HTTP, JSON, request validation, structured errors, third-party API integration
Payments & Web	Checkout workflows, payment-state handling, idempotency, retry handling, JWT authentication, role-based access control
Testing & Debugging	Postman, Node.js Test Runner, k6, Playwright Test (in progress), API response validation, negative testing
Data & Tools	MongoDB, MySQL, JSON persistence, MongoDB Compass, Git, GitHub Actions, Vercel, Render
Core CS	OOP, DSA, DBMS, Operating Systems, Computer Networks, MVC

SELECTED PROJECTS

PayRecover — Payment Resilience Simulator | **Node.js, REST APIs, JSON persistence, Node.js Test Runner** Oct 2026

- Built a simulated payment API covering success, decline, offline queueing, and timeout-after-capture states; no real bank or UPI integration.
- Implemented idempotency keys, reconnect sync, and mock-ledger reconciliation to prevent duplicate simulated charges after ambiguous retry outcomes.
- Exposed health, create/list/lookup, retry, sync, and reconciliation endpoints; validated amounts and malformed or oversized request bodies.
- Added six automated tests covering key failure paths and modeled explicit payment states with capped retry-delay metadata.

CinemaSync — Movie Ticket Booking Platform | **React, Node.js, Express.js, MongoDB, JWT, Razorpay, Stripe** Dec 2025–Feb 2026

- Built movie discovery, booking, search, and checkout workflows with REST APIs, modular MVC structure, request validation, and structured errors.
- Implemented seat-reservation logic for concurrent bookings and protected routes with JWT authentication and role-based authorization.
- Integrated Razorpay and Stripe checkout flows with fallback handling; exercised critical booking endpoints under load using k6.

E-commerce Test Automation Suite | **JavaScript, Playwright Test** Oct 2026–Present

- Developing end-to-end tests for product search, product details, cart interactions, and checkout-form validation.
- Organizing reusable locators, assertions, and negative cases to reproduce and diagnose UI regressions.

EventSphere — Event Registration Application | **React, Node.js, Express.js, MongoDB, GitHub Actions, k6** Aug–Oct 2025

- Developed event and registration CRUD APIs with server-side validation, consistent error responses, and integration documentation.
- Configured GitHub Actions pre-merge checks and used k6 with 500 virtual users to evaluate endpoint behavior and p95 response times.

EDUCATION

B.E. Computer Science & Engineering — Chandigarh University, Mohali, Punjab 2024–2028

CGPA: 7.00/10 • Coursework: OOP, DSA, DBMS, Operating Systems, Computer Networks

ADDITIONAL

Problem solving: 200+ DSA problems across LeetCode, HackerRank, and CodeChef. Hackathons: BlackBox AI — NSUT Delhi (Nov 2025); Zinnovation 2.0 — Chandigarh University (Jul 2025).
